

Amendments to the Specification

Please amend the Specification on page 5, third full paragraph as follows:

Figure 3 provides a Western blot having a first lane of a wild-type GFP control, a second lane with GFP having a 20 amino acid protease substrate insert, a third lane having the GFP protease substrate co-transformed into ~~baeterial~~bacteria with the protease, and a fourth lane with the GFP protease substrate co-transformed into bacteria with the protease and the protease expression induced.
